STOCKSENSE

PHYSICAL INVENTORY APPLICATION

Professional Overview & Feature Documentation

Streamlined Counting, Reconciliation & ERP-Ready Reporting

Prepared by InfoSoft | Confidential Product Documentation

Application Overview

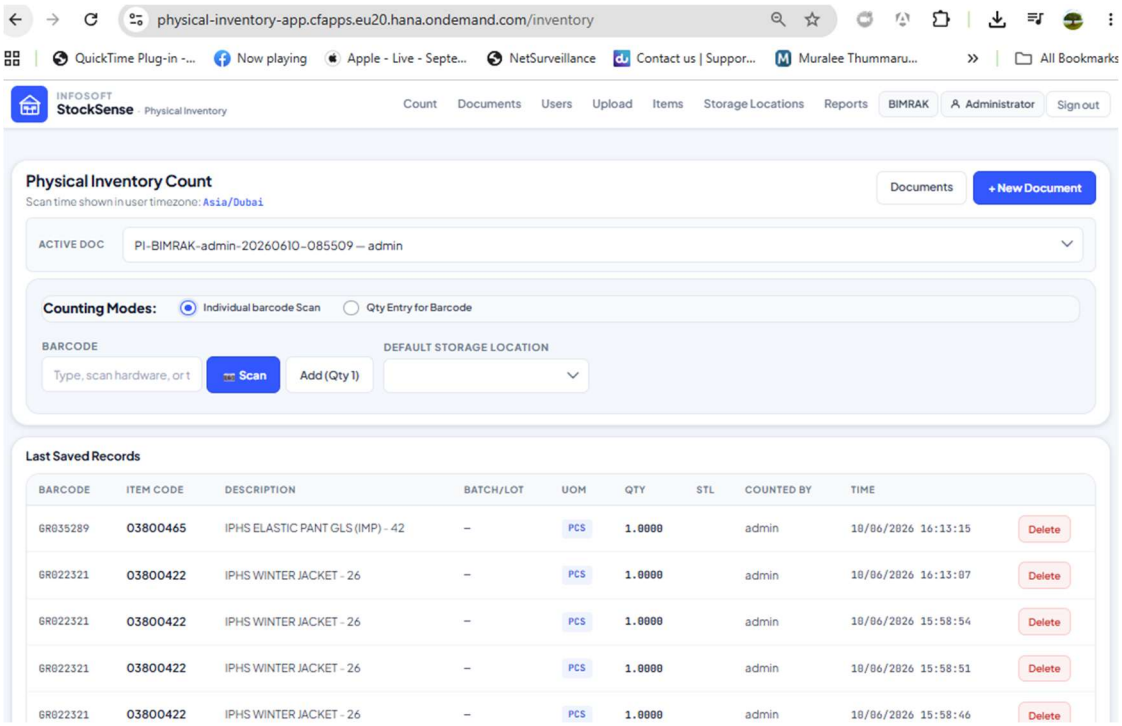
InfoSoft Stock Sense is a web-based Physical Inventory Management solution designed to streamline inventory counting, reconciliation, reporting, and ERP integration. The application supports standard mobile devices, barcode scanners, and dedicated scanning hardware, enabling organizations to perform accurate and efficient stock counts.

Key Features

- Physical Inventory counting using any standard mobile device or barcode scanner (no PDA dependency).
- User Management with Company Assignment, User Time Zone, and Role-based Access Control.
- Company-specific Upload and Download functionality.
- Item Master Upload and Management.
- Storage Location Upload and Management.
- Physical Inventory Reporting and Download Options.
- Stock Variance Reporting for inventory reconciliation.
- User-wise Physical Inventory Summary Reports.
- Item-wise Physical Inventory Summary Reports.
- ERP Physical Inventory Adjustment Template Download.

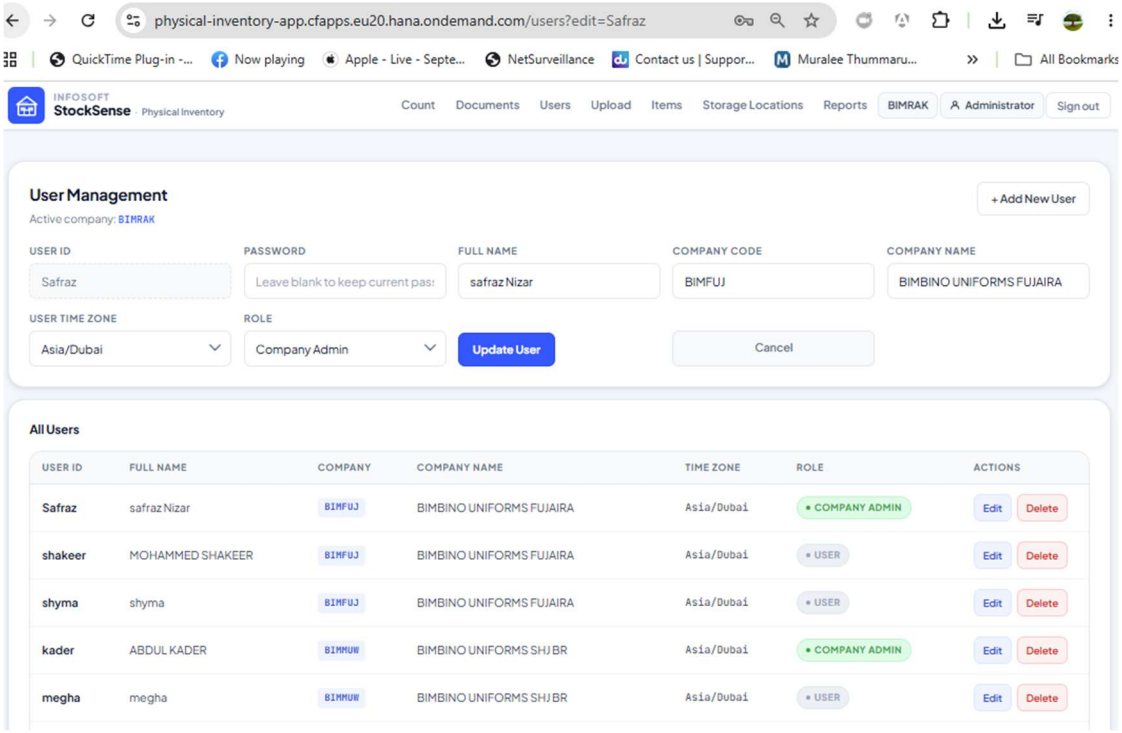
Physical Inventory Count

Supports barcode scanning using standard mobile devices, handheld scanners, and PDA devices. Users can perform individual barcode scans or quantity entry-based counting. Count timestamps are displayed based on the user's selected time zone.



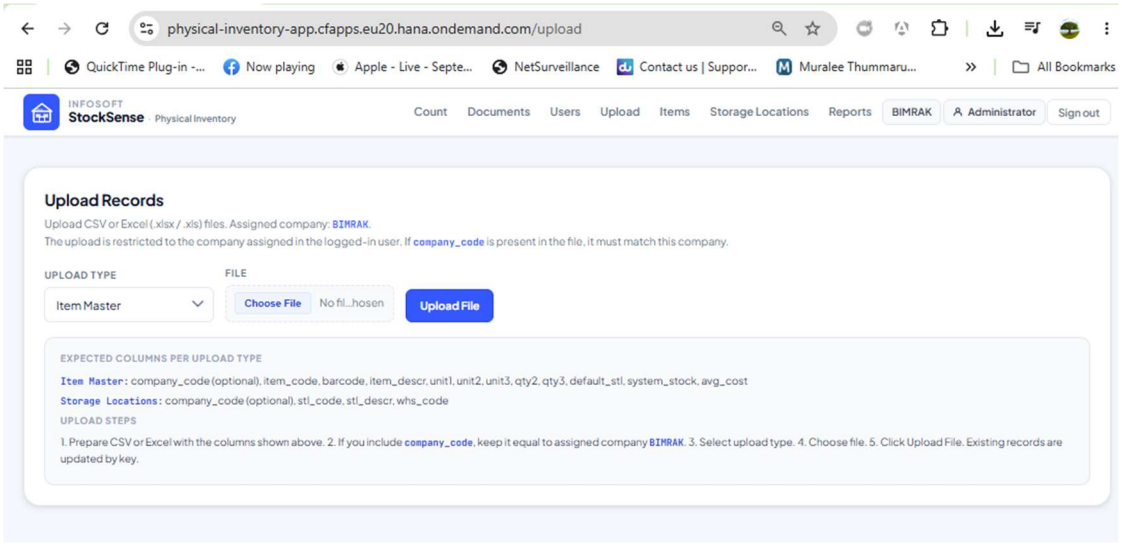
User Management

Administrators can manage users, assign company codes, maintain user time zones, and configure roles such as Company Admin and User.



Upload Management

Flexible upload functionality for Item Master and Storage Locations. Uploads are restricted to the company assigned to the logged-in user.



Reports & Downloads

Comprehensive reporting including Physical Inventory, Stock Variance, User-wise Physical Inventory Summary, and Item-wise Physical Inventory Summary.

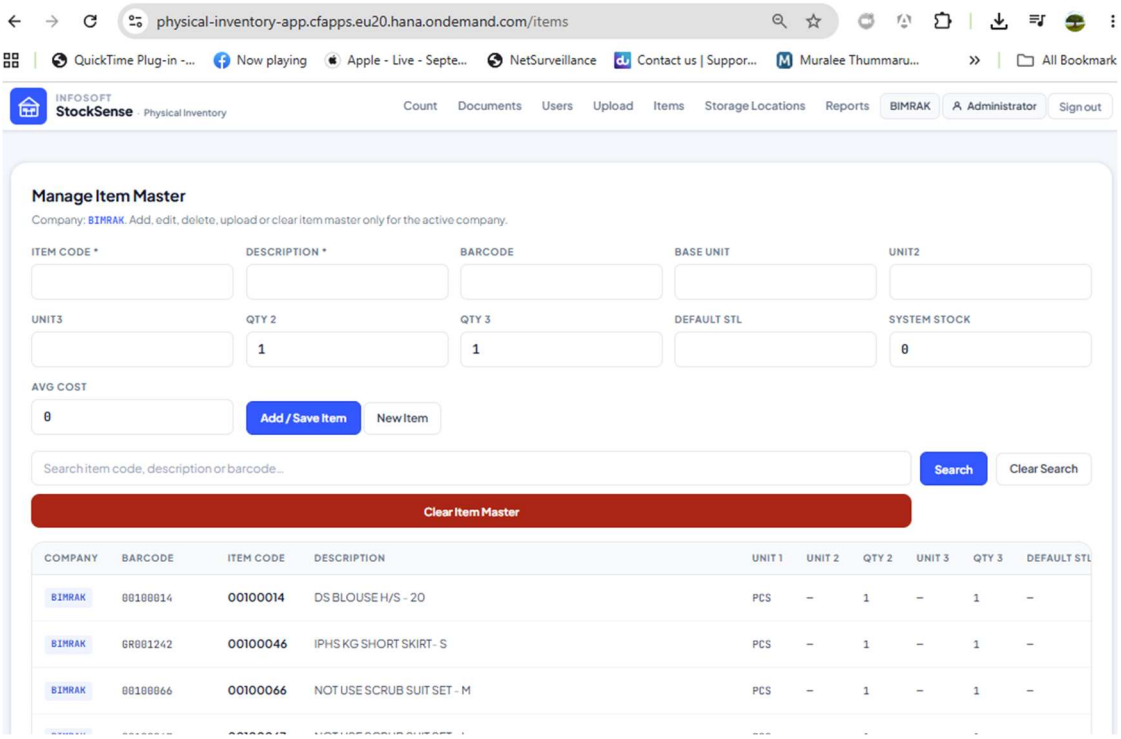
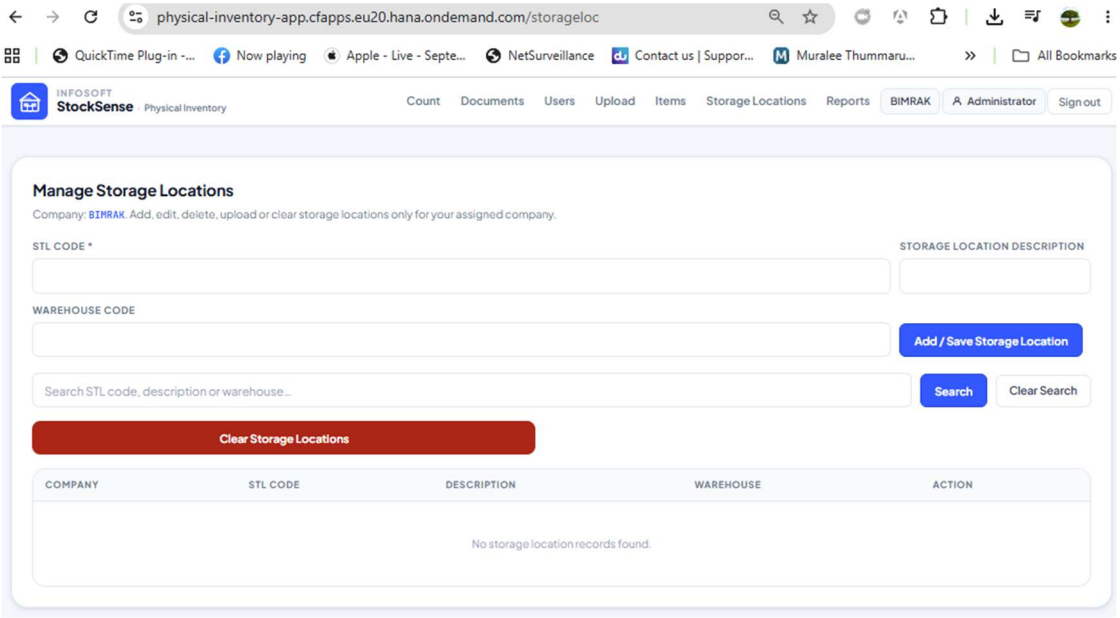
Item Master Management

Create, update, search, and maintain inventory items including barcode, unit of measure, storage location, stock quantity, and average cost.



Storage Location Management

Maintain storage locations and warehouse mappings specific to the user's assigned company.



ERP Integration Support

The application provides template download functionality to support ERP Physical Inventory Adjustment uploads. This enables seamless inventory reconciliation and stock adjustment processing.

Benefits

- Improved inventory accuracy.
- Reduced physical counting effort.
- Company-level data segregation and security.
- Device-independent barcode scanning.
- Comprehensive reporting and audit trail.
- ERP-ready inventory adjustment output.
